Sampling_Methods	Students will collect and kill insects following standard entomological methods including nets, jars, and temporary traps. The material will become part of the permanent collection of insects found at the preserve.
Description	Collection and observation of insects to provide students with opportunities to learn about insects. Sampling will have no lasting negative impact. Students will remove only a tiny fraction of the existing insect

	populations. Experience has shown that these collections and this intensity of collection will not affect local populations. Sampling will not destroy habitat nor impact preservation values
